

## Integrating your Magento V2 store with Click & Drop

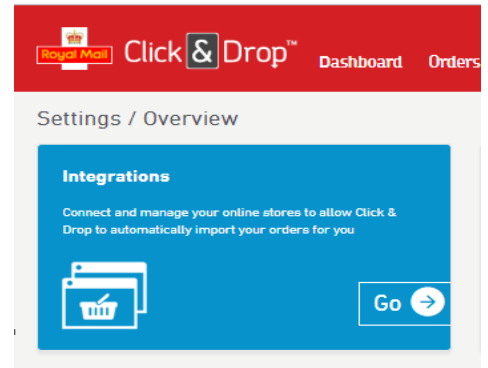

# How to set up integration with your Magento V2 store

Within Click & Drop, click on the 'Settings' link.

The 'Settings / Overview' page will open.

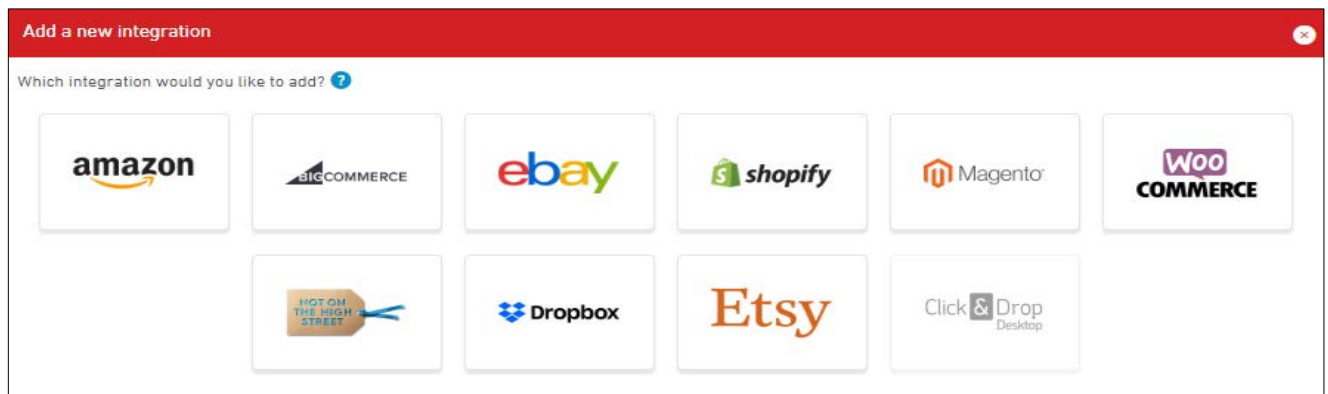

In the 'Integrations' section, click on the 'Go' button

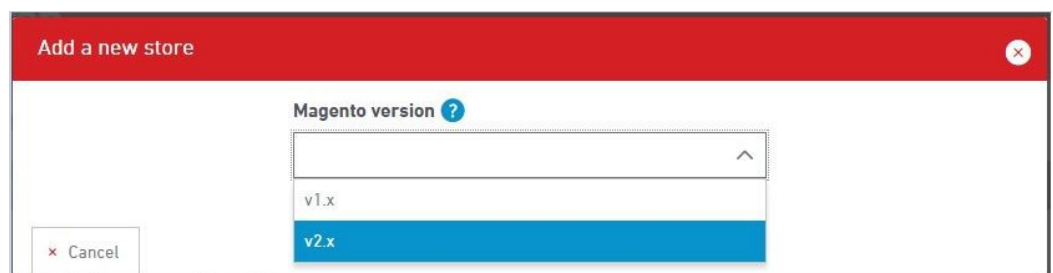

Then, click on 'Add a new integration'

A new pop up window will appear asking you to choose which marketplace store that you would like to connect to. Click on 'Magento.'

Then select 'v.2x' from the drop down list

Another popup window will appear with your Callback URL and Identity link and instructions to help you.

**Add a new integration**

Click here to view our [help guide](#) on how to connect your Magento v2 integration to Click & Drop

Magento version ?

v2.x

To grant Click & Drop access to your Magento store, please login to your Magento Admin Panel, go to **System > Integrations**, click **Add New Integration** and enter the following information in the corresponding fields:

Callback URL:

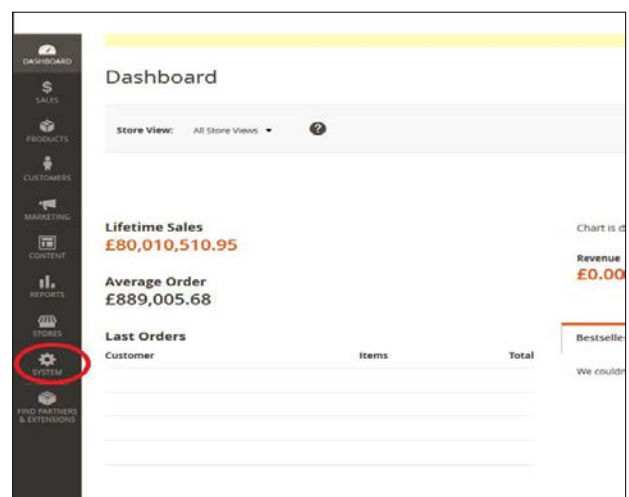

Identity link:

For the connection to be completed successfully your store url must be configured to use https.

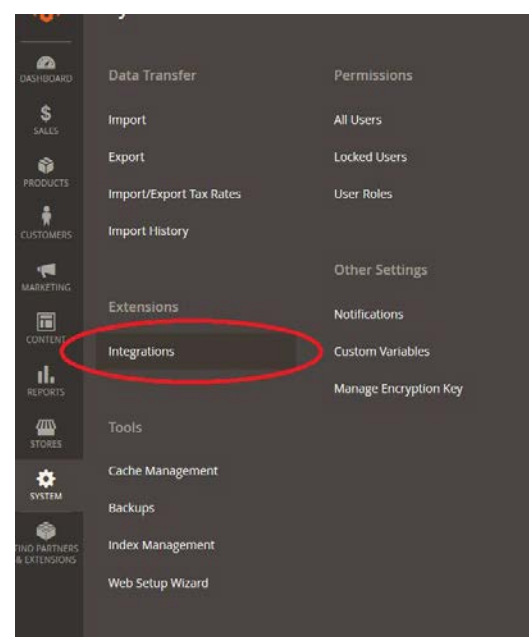

Cancel

Keep this page open, as you will need to copy and paste these details into your Magento account in order for the integration to work.

In a new tab or window, sign into your Magento account and go to your 'Settings'.

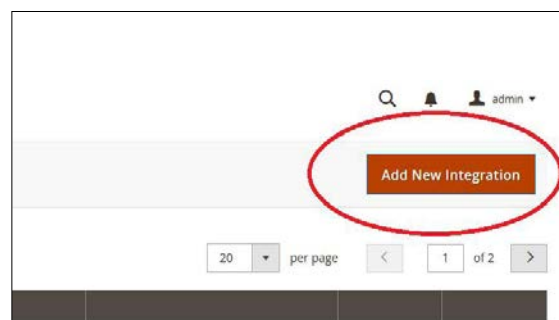

Next, select 'Integrations'.

Next click 'Add New Integration'.

There are two separate tabs on the page: 'Integration Info' and 'API'. The page will be open on 'Integration Info' by default.

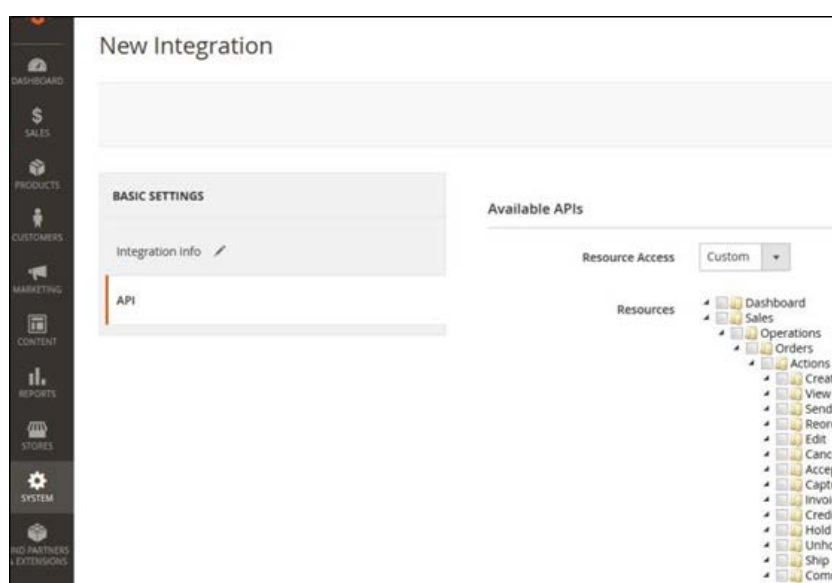

Here you will need to type in your name, email address and password, and then copy and paste the Callback URL and Identity link URL from your Click & Drop page into the corresponding fields in Magento.

A screenshot of the 'Add New Integration' form in the Magento 2 admin interface. The form is titled 'General' and contains several input fields: 'Name' (with a red asterisk), 'Email', 'Callback URL' (containing 'https://sflite-dev.storefeeder.com/magento/callback?id=b03d5984-e033-479c-ac7f-c2652fe7d736'), and 'Identity link URL' (containing 'https://sflite-dev.storefeeder.com/magento/identity/'). Below the 'Identity link URL' field is a small text note: 'URL to redirect user to link their 3rd party account with this Magento integration credentials.' At the bottom of the form is a section titled 'Current User Identity Verification' with a 'Your Password' field (with a red asterisk and masked dots). In the top right corner of the form, there are 'Back' and 'Save' buttons.

Once you have done this, the next step is to set the application API privileges. To do this, click the 'API' tab on the left of your page as shown. You don't need to click the 'Save' button at this point.

To ensure Click & Drop has privileges to download, process, and mark your orders as despatched, select 'All' from the drop-down box labelled 'Resource Access'. All boxes on the page will then be checked.

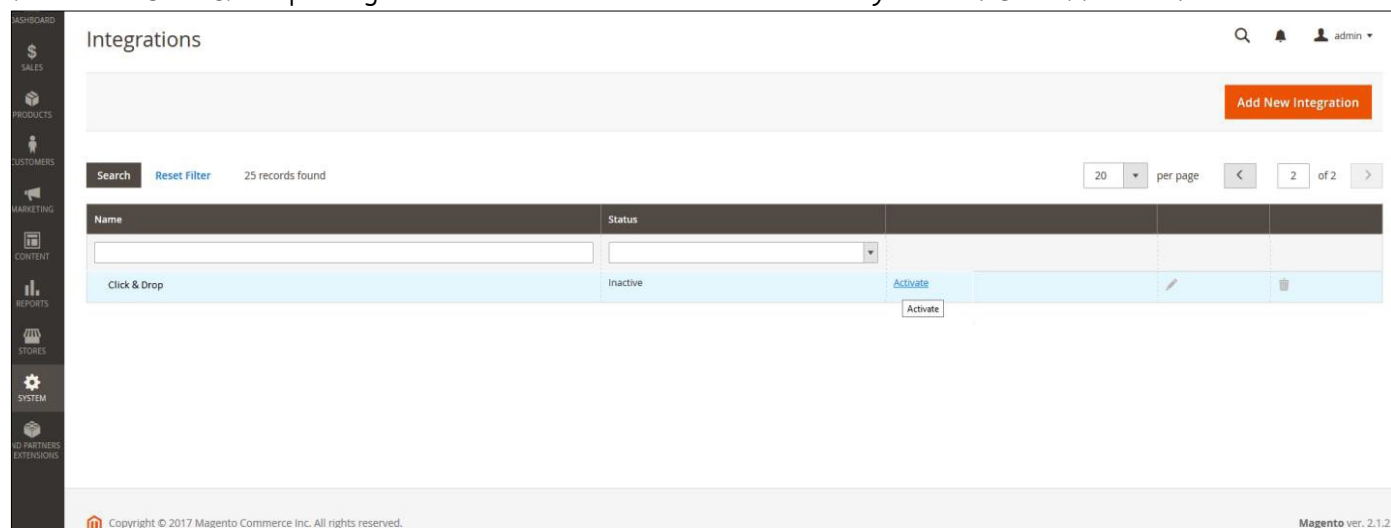

**NB:** Some browsers or Magento versions may behave differently at this point, so if you have selected 'All' for resources and the boxes are not checked, you may need to select 'Custom' access and check each box individually.

The last step is to click the 'Save' button to finish the process, and you will be taken back to your 'Integrations' page.

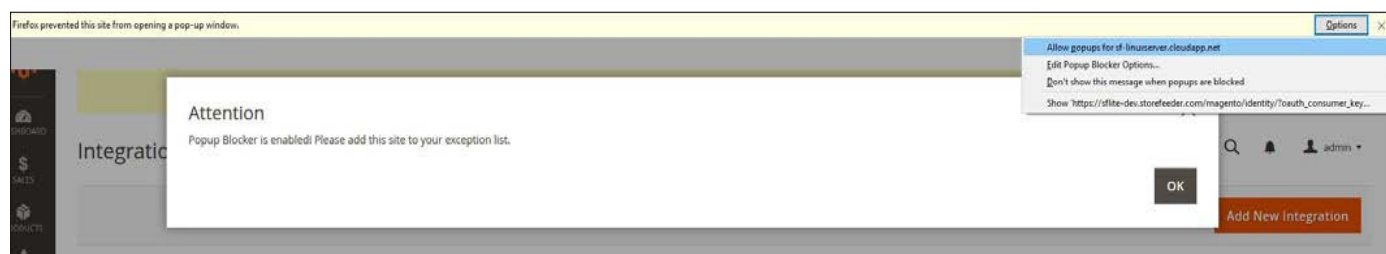

Your new Click & Drop integration will be visible at the bottom of your list. Click 'Activate'.

A new pop-up window will return you to Click & Drop.

Please note, some browsers may warn you they have blocked the pop-up. You will need to unblock the pop up in order to continue. You will need to select to 'allow pop-ups for Magento.'

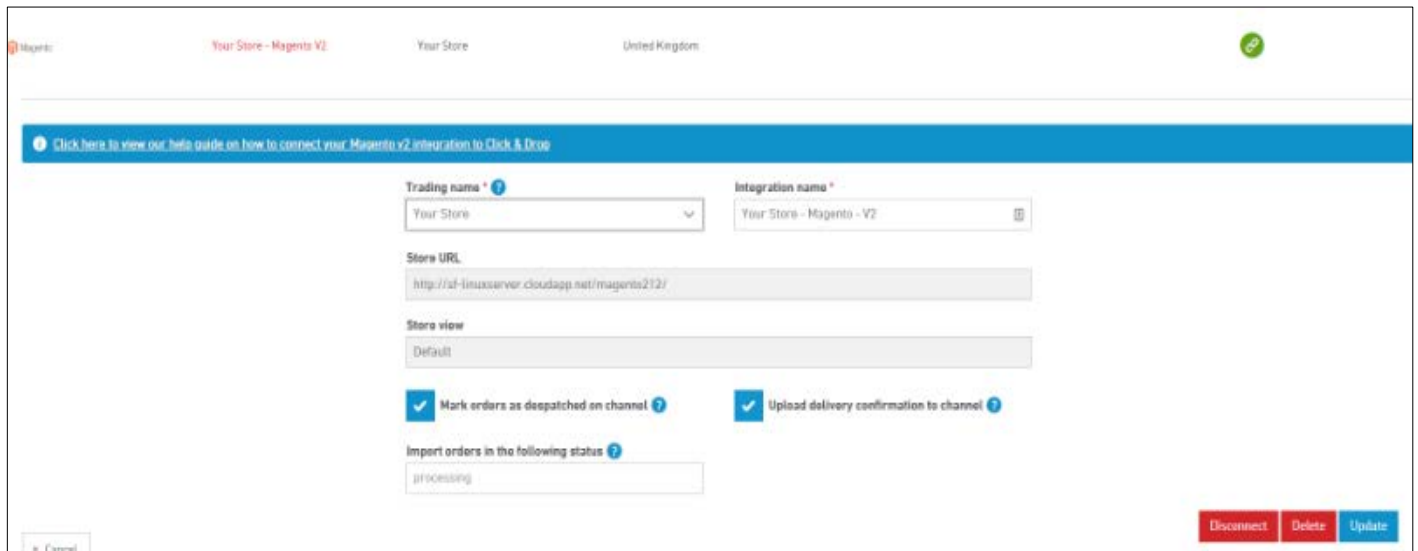

The pop-up window will open to confirm your Magento store is connected to Click & Drop, but that the channel is currently inactive.

Click on the words 'Click & Drop' in red text and this will return you to your Click & Drop Integrations page

Here you will need to complete some final information

The screenshot shows the 'Your Store - Magento V2' integration settings page. At the top, there's a blue banner with a link to a help guide. Below this, the form includes fields for 'Trading name' (a dropdown menu showing 'Your Store'), 'Integration name' (a text field with 'Your Store - Magento - V2'), 'Store URL' (a text field with 'http://el-linuxserver.cloudapp.net/magento212/'), and 'Store view' (a dropdown menu showing 'Default'). There are two checkboxes: 'Mark orders as despatched on channel' and 'Upload delivery confirmation to channel', both of which are checked. Below these is a field for 'Import orders in the following status' with 'PROCESSING' entered. At the bottom right, there are three buttons: 'Disconnect' (red), 'Delete' (red), and 'Update' (blue). A green status icon is visible in the top right corner of the page header.

**Trading name:** select your trading name from the list.

**Integration name:** This will be automatically filled once you enter your Trading name.

**Mark orders as despatched on channel:** Select this box if you wish for your orders to be marked as 'Complete' in Magento once they have been marked as despatched within Click & Drop.

**Upload delivery confirmation to channel:** Select this if you want the delivery confirmation to be sent to Magento if tracking number is not sent.

**Import orders of the following status:** If you use a status code other than 'processing' for the orders in your store, type the code in the box.

**NB:** Incorrectly changing this status may result in your orders not downloading into Click & Drop.

Click on the 'Update and activate' button to begin downloading and processing your orders. The red chain link icon will turn green to show your integration has been successful.

## Store order status and download frequency

Your orders must be in the status of 'Processing' and no older than 7 days for them to download.

Store orders that are in the correct status will download into Click & Drop every 10-15 minutes and data from Click & Drop will update into your store every 30 minutes.

## Disconnecting from Magento

You're free to disconnect from Magento at any time via Click & Drop.

In the 'Integrations' section under the 'Settings' link, click on 'Go'. Click anywhere within the Magento row to expand the data. To disconnect the link between Magento and Click & Drop, simply click on 'Delete'. Once you've disconnected, you'll no longer be able to download and process any orders from the store.

If you need to reconnect the store at a later date, simply repeat the connection process.
